The closest alternative is the Amazon Basics Cross Rail Roof Rack, 132 cm. It's essentially the smaller sibling of the main product, and at £45.14 it's cheaper while still holding the same 4.6★ rating. The shorter span makes it a better fit for cars with narrower raised side rails, so if the 142 cm version feels too long or awkward, this is the neatest swap. The downside is obvious: it won't suit vehicles that need the extra width of the 142 cm bars, so check your rail spacing carefully before buying.

HandiWorld HRACK HandiRack Universal Car Roof Rack is a different kind of option altogether. At £64.00, it costs more than the Amazon Basics bars, but it's designed as a quick-fit, heavy-duty roof rack solution rather than a simple pair of crossbars. That makes it appealing if you want something more universal or temporary, especially for occasional use on multiple cars. The trade-off is that it's bulkier and less like a permanent, always-on roof bar setup. Choose this if you want flexibility and don't mind paying extra for a more adaptable system.

VEVOR Universal Roof Rack Cross Bars, 90KG Load Capacity, are one of the best budget alternatives at £42.99. They undercut the Amazon Basics 142 cm rack on price and still offer adjustable crossbars with locks, which is useful if security matters when parking up in the UK. The 90kg capacity is respectable for roof boxes, bikes, or camping gear, but VEVOR's brand reputation and fit finish may not feel as polished as Amazon Basics. This is a strong pick if you want the lowest price without dropping into no-name territory.

VEVOR Roof Rack Cross Bars, 200 lbs Load Capacity, are similarly priced at £42.99, but the headline difference is the stated load rating. If you're carrying heavier kit and want reassurance on strength, this version is worth a look. It's still aimed at raised side rails with a gap, so it's comparable in fit style to the Amazon Basics product. The main downside is that specifications can be less straightforward than the Amazon listing, so it's important to double-check compatibility and included fittings before ordering. Pick this if load capacity is your priority.

MaxxHaul 70210 Hitch Mount Bike Rack is not a roof rack at all, but it's a smart alternative if your main goal is carrying bikes rather than luggage. At £59.59, it sits in the same price bracket as the roof bars, and it can be easier to use than lifting bikes onto a roof box or crossbars. The big advantage is convenience, especially for heavier bikes or shorter drivers. The downside is that it needs a tow hitch and doesn't help with roof cargo, so it only makes sense if you already have hitch access and mainly transport bikes. For mixed loads, the roof bar options are more versatile.

Still Buy the Original If...

Buy the original Amazon Basics 142 cm rack if your vehicle specifically needs that longer fit and you want a well-rated, straightforward roof bar set with strong value. It's the safest choice if you want a simple, known-good option for roof boxes, bikes, or camping gear.
